

# seca supra plus 720

Towers over  
lofty requirements.

- Analysis of body fat and body water. For better control.
- Big display on a high pedestal. For easy reading.
- Keyboard below display. For easy data entry.
- More than 165 years of experience. For maximum precision.
- From the global market leader for medical weighing and measuring.

## seca supra plus 720:

### For the highest stability requirements.

**T**ake a look at the big display. It is located on the high pedestal. Reading cannot be easier - with or without glasses.

#### For the highest design requirements.

Only seca supplies a pedestal scale with body fat and water analysis. There is no need to bend over because the keyboard is located at hip height. Stepping on is very easy since the base is kept beautifully flat. In addition to all this elegance, the scale has great stability, provided by the four load cells connecting the base and platform. The construction makes it suitable for the toughest uses even as it cuts a fine figure at home. Body-conscious people appreciate its strength and admire its shape.

#### For the highest requirements for functionality.

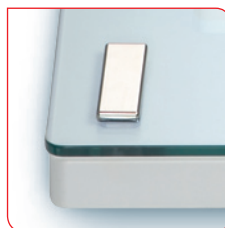

The base is made of high-quality materials with outstanding surface hardness which resist shocks and scratches. The weighing platform consists of 8-millimetre thick single-pane safety glass and the four load cells are not made from just any material, but from high-quality stainless steel. These are materials that take permanent tough use lightly. Just like the batteries, since seca supra plus 720 also has electricity-saving automatic switch-off.

#### For the highest precision requirements.

The glass platform is generously coated with optically transparent ITO (Indium Tin Oxide), which is highly conductive and capable of ensuring uninterrupted skin contact during measuring. This guarantees the most precise measurements. Switching on is just as easy: simply press the relevant memory on the display and start measuring. The scale makes note of every stored user. You see, a scale from seca also makes it easy for people with high requirements.

Display on a high pedestal. Can be read with particular ease.

Four load cells made from brushed stainless steel.
